POLES

US DEEP CYCLE

Crown Marine Deep Cycle batteries are a necessity for applications which require deep discharges of the batteries, like electrical scissor lifts, aerial devices, industrial cleaning machines ...

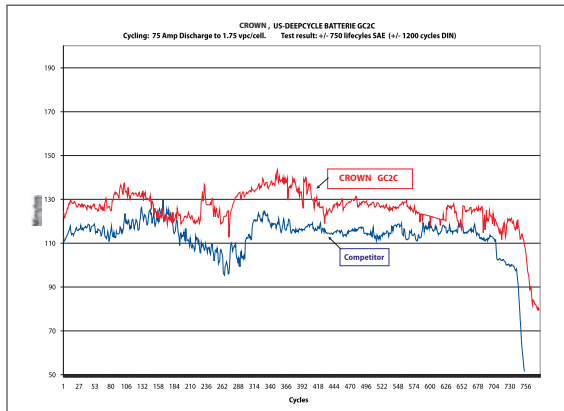

Crown uses high density oxide to create a firmer cohesion of the active material, which results in a longer battery life in spite of deep discharges!

Nobody produces Deep-cycle so **powerful**, so **strong** and so **heavy**... Nobody...

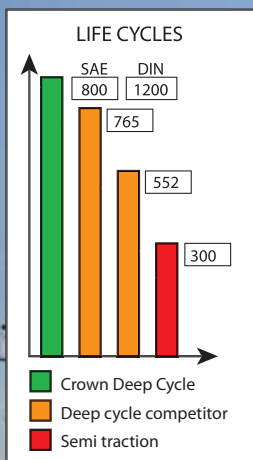

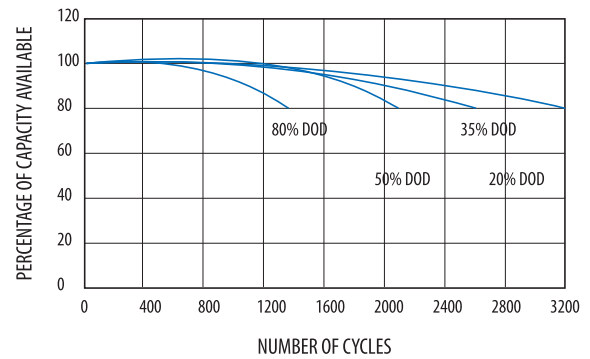

Because nobody invests in the heaviest, strongest and thickest plates that exist in the world of the Deep-cycle batteries.

Our plates are minimum 10% thicker than the plates of our competitors!

This combined with the characteristics of "PROeye" and the "Low Maintenance Container", you receive a battery that lasts longer and performs better than any other brand: that's what we guarantee you!

Battery life (cycles) of a traction battery (pos. Tubular plates & Deep Cycle) in relation to the depth of the discharge

Depth of DCHG (%)	No. of cycle (DIN)	Life span (year)
80	1250	4.2
70	1450	4.8
60	1700	5.7
50	2050	6.8
35	2600	8.7
20	3200	10.7
